

Perimeter of a Rectangle

Name: _____

Date: _____

To find the perimeter of a rectangle, multiply the length and width. $P = 2(L + W)$.

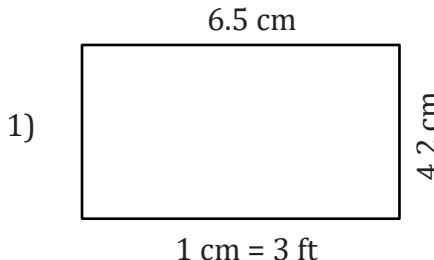

5.8 cm

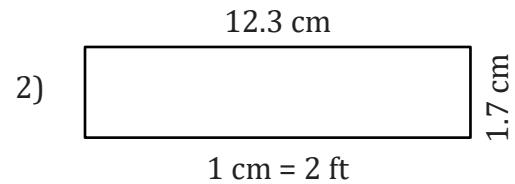

1 cm = 2 ft

$$\text{Perimeter} = 2(11.6 \text{ ft} + 7 \text{ ft}) = 37.2 \text{ ft} = 37 \text{ ft}$$

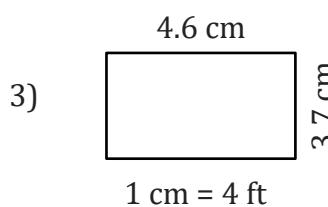

Determine the actual width, height and perimeter of each rectangle and round the perimeter to the nearest whole number.

Perimeter of a Rectangle

Name: _____

Date: _____

To find the perimeter of a rectangle, multiply the length and width. $P = 2(L + W)$.

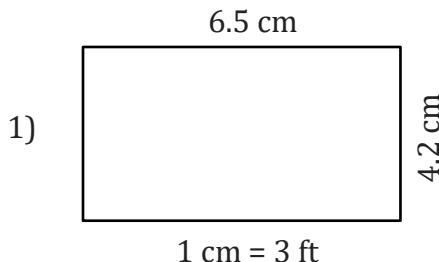

5.8 cm

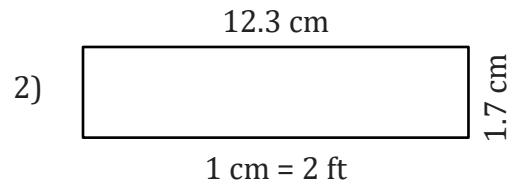

1 cm = 2 ft

$$\text{Perimeter} = 2(11.6 \text{ ft} + 7 \text{ ft}) = 37.2 \text{ ft} = 37 \text{ ft}$$

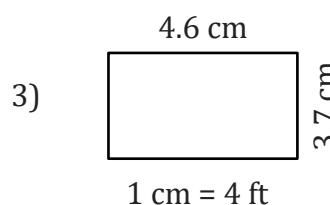

Determine the actual width, height and perimeter of each rectangle and round the perimeter to the nearest whole number.

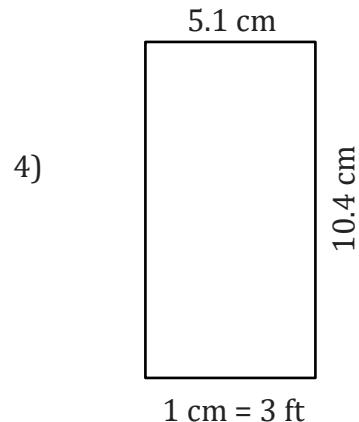

$$\text{Perimeter} = 2(19.5 \text{ ft} + 12.6 \text{ ft}) = 64.2 \text{ ft} = 64 \text{ ft}$$

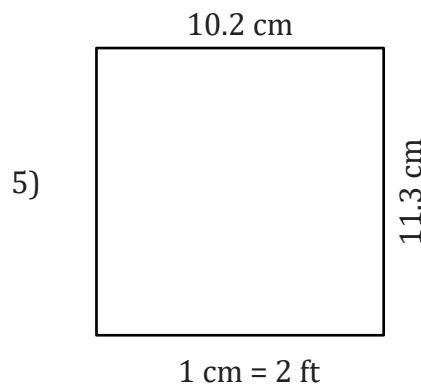

$$\text{Perimeter} = 2(24.6 \text{ ft} + 3.4 \text{ ft}) = 56 \text{ ft} = 56 \text{ ft}$$

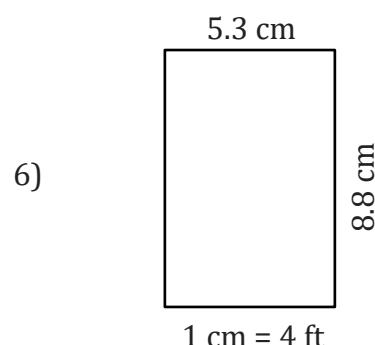

$$\text{Perimeter} = 2(18.4 \text{ ft} + 14.8 \text{ ft}) = 66.4 \text{ ft} = 66 \text{ ft}$$

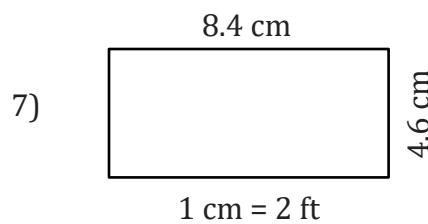

$$\text{Perimeter} = 2(15.3 \text{ ft} + 31.2 \text{ ft}) = 93 \text{ ft} = 93 \text{ ft}$$

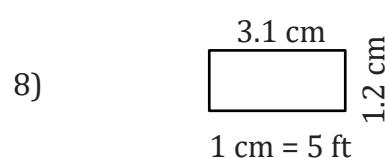

$$\text{Perimeter} = 2(20.4 \text{ ft} + 22.6 \text{ ft}) = 86 \text{ ft} = 86 \text{ ft}$$

$$\text{Perimeter} = 2(21.2 \text{ ft} + 35.2 \text{ ft}) = 112.8 \text{ ft} = 113 \text{ ft}$$

$$\text{Perimeter} = 2(16.8 \text{ ft} + 9.2 \text{ ft}) = 52 \text{ ft} = 52 \text{ ft}$$

$$\text{Perimeter} = 2(15.5 \text{ ft} + 6 \text{ ft}) = 43 \text{ ft} = 43 \text{ ft}$$
